

CORRFLO

A NEW PRODUCT from the most recognized company in the industry!

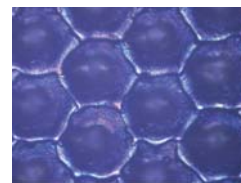

We've set a new
STANDARD
for the
Standard!

The most **DURABLE** cost-effective laser engraved ceramic anilox roll for standard graphic corrugated converters.

What is CorrFlo?

CorrFlo is a unique laser engraved product that has been able to be developed due to Pamarco's investments in the latest Triplex thermal spray ceramic technology. This latest technology has given us ceramic properties that are:

- Harder (Up to 1400 vickers)
- Denser (Less than 1% Porosity)
- Smoother than Typical Ceramic
- More Durable
- More Consistent

These new properties allow us to minimize the machining/finishing times required for the mid-range screen counts yet still maintain the necessary cell integrity and geometric tolerances designed by the **OEM**. CorrFlo is ideal for the **165-220** screen counts with cell volumes in the **8-14 BCM** region.

Call your local Pamarco Global Graphics representative to discuss YOUR specific CorrFlo requirements.
